Q-Rescue Quantum Disaster Response Network

Team Name : Quantum Nexus

Quantathon 2K26,
Pragati University

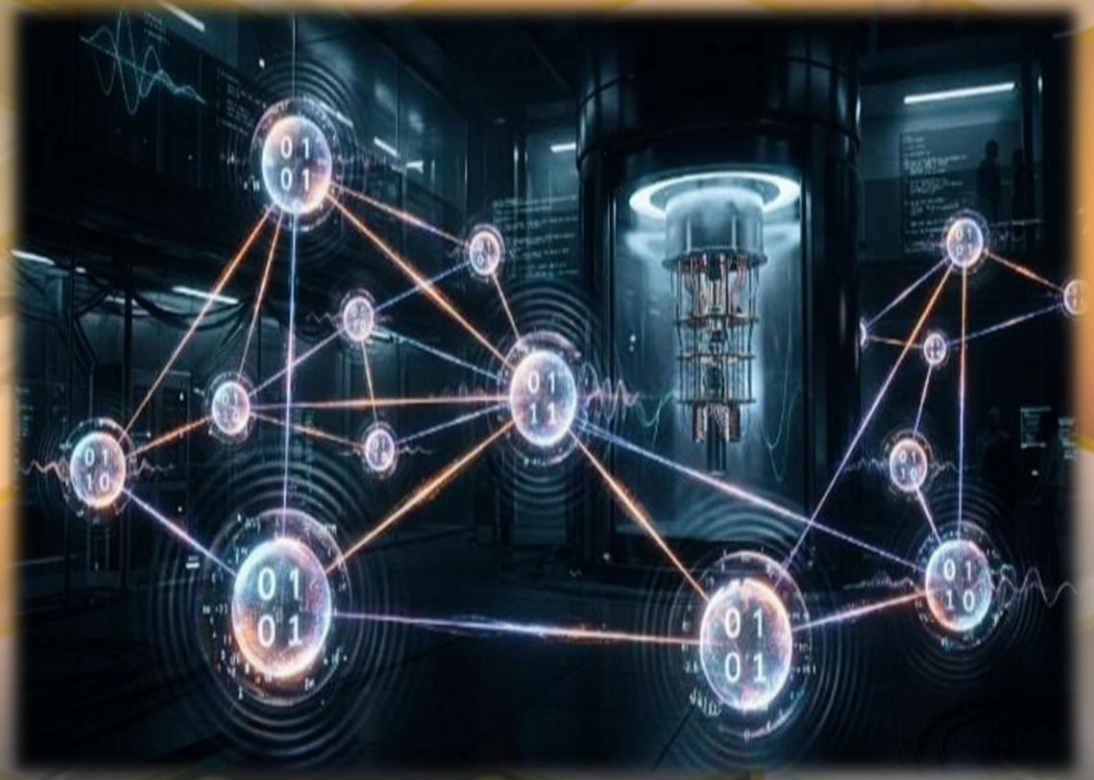

Problem Statement

- The Problem Natural disasters cause delays in rescue operations.
- Traffic and blocked roads slow emergency teams.
- Resources are not always sent to the right place.
- Every minute of delay can cost lives.

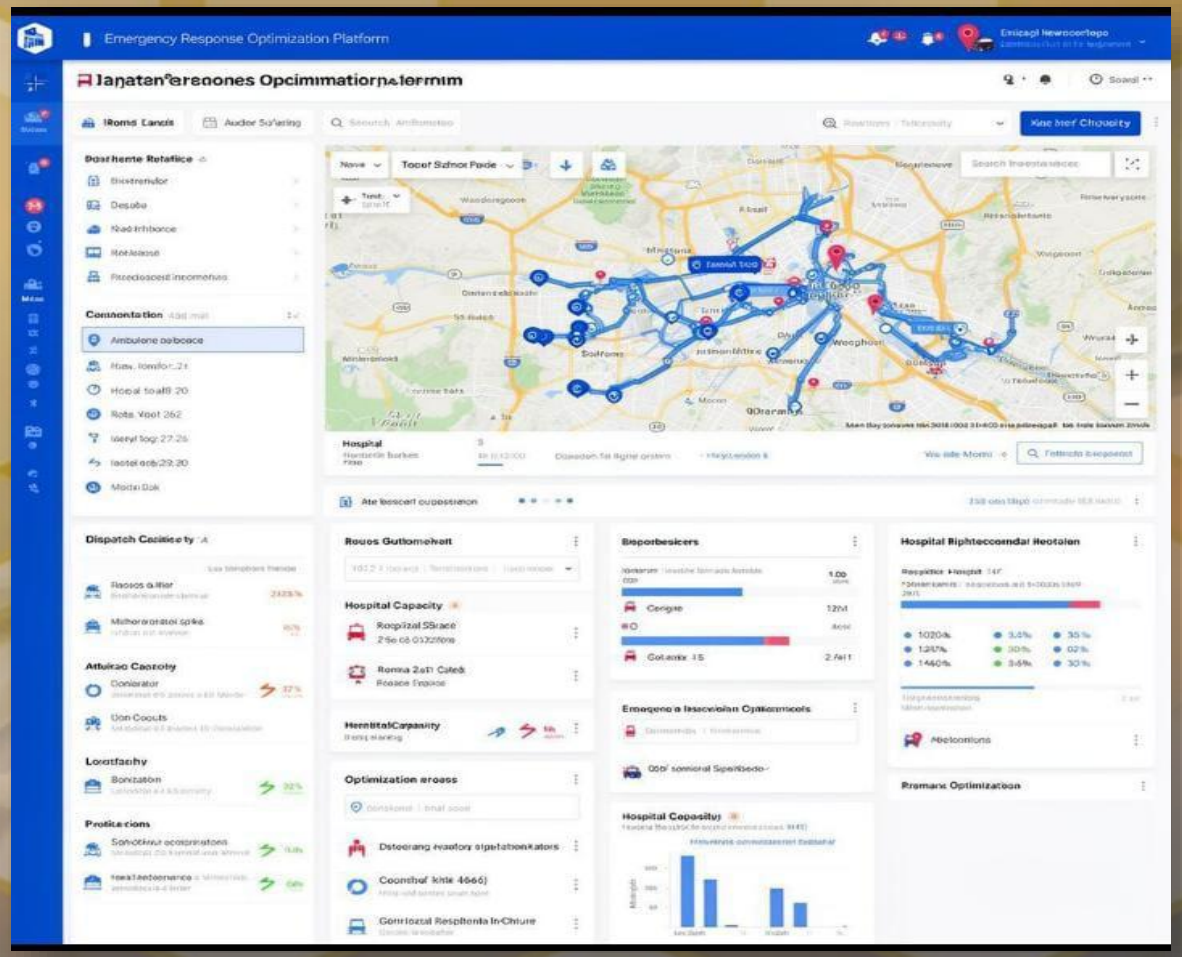

Our Solution

- Our Idea Use Quantum Computing for faster decision-making.
- Analyze multiple rescue routes at the same time.
- Suggest the quickest and safest route.
- Help distribute emergency resources efficiently.

How It Works (Working Process)

- Disaster information is collected.
- The system receives emergency requests.
- A Quantum Optimizer finds the best routes.
- Rescue teams receive instant route suggestions.
- Faster rescue operations save more lives.

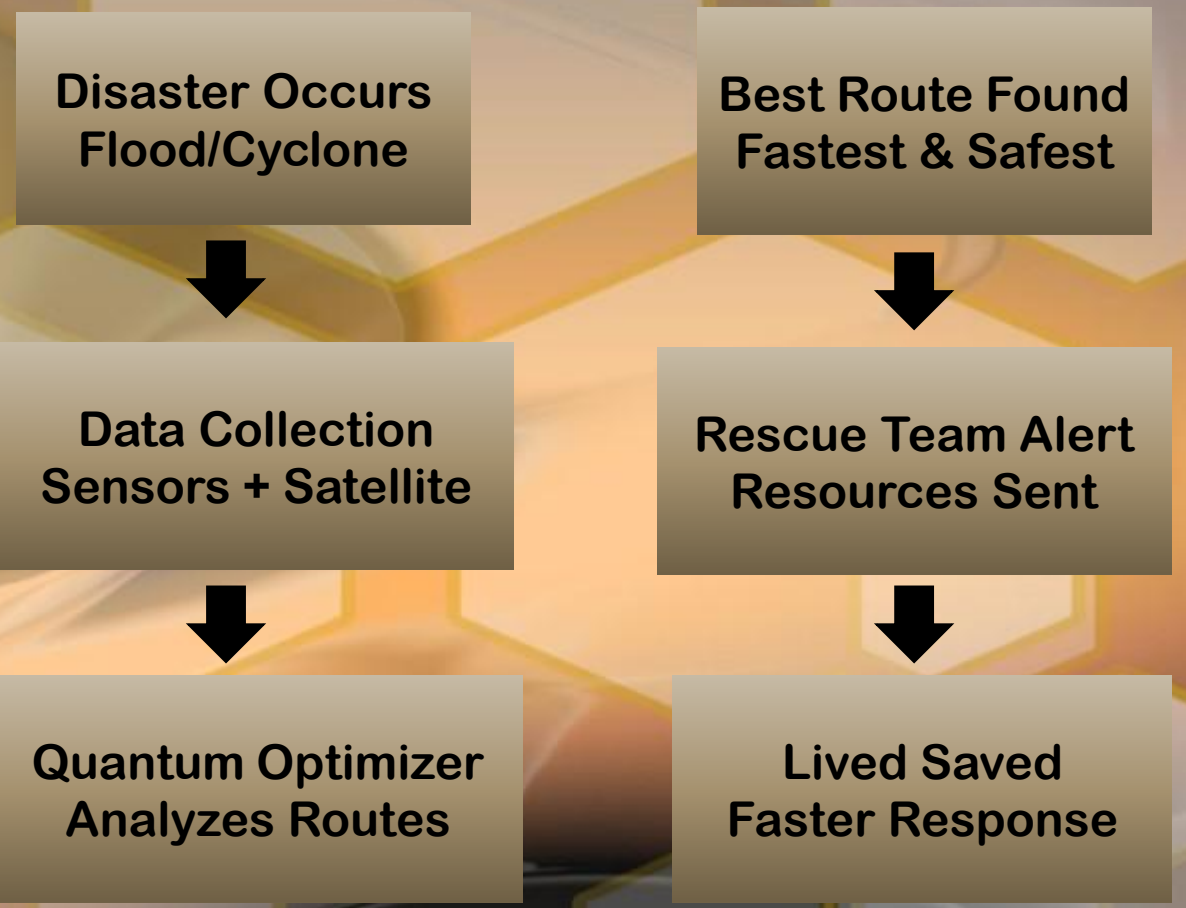

Benefits

- Faster rescue response.
- Better resource allocation.
- Reduced travel time.
- Improved disaster management.
- Future-ready smart emergency system.

Future Scope

- Smart Cities
- NDRF & Disaster Management
- Flood and Cyclone Response
- Earthquake Emergency Planning
- AI + Quantum integrated rescue systems

Thank You
